ECONOMIC INDICATORS

2 Dr. Nabil Chaiban November 20, 2022 Economics 89

What are Economic Indicators?

An economic indicator is a metric used to assess, measure, and evaluate the overall state of health of the macroeconomy. Economic indicators are often collected by a government agency or private business intelligence organization in the form of a census or survey, which is then analyzed further to generate an economic indicator.

Financial analysts and investors keep track of macroeconomic indicators because the economy is a source of systematic risk that affects the growth or decline of all industries and companies.

Which is the Primary Economic Indicator?

Gross Domestic Product (GDP)

The Gross Domestic Product (GDP) is widely accepted as the primary indicator of macroeconomic performance. The GDP, as an absolute value, shows the overall size of an economy, while changes in the GDP, often measured as real growth in GDP, show the overall health of the economy.

The GDP consists of four components, namely:

- Consumption
- Investment
- Government Expenditure
- Net Exports
